

POLYURETHANE AND ACRYLIC COATINGS

EXCEPTIONAL QUALITY AND PERFORMANCE

POLYURETHANE AND ACRYLIC COATINGS

Due to their versatility, polyurethane products are recommended for application to surfaces subject to high levels of wear-and-tear, and when **excellent chemical/physical resistance** is required, for example in offices and kitchens.

ICA produces a wide range of matt and gloss, transparent and pigmented products, with open or closed pore.

CHARACTERISTICS AND ADVANTAGES

- Versatility and ease of use
- Spray, roller, curtain coater or electrostatic application
- Excellent chemical/physical resistance
- Excellent transparency
- Wide range of products with high solid content
- Completely formaldehyde-free
- NMP-free
- APEO-free
- Available in transparent, colored and pigmented versions

FOR MORE INFORMATION

COLOR RANGE

The color can be chosen from any of the three color charts (ICA, RAL and NCS), which encompass more than 2,300 colors, all of which can be faithfully reproduced thanks to the ICA Color tintometric system. ICA can also create sample colors at the client's request, and can conduct color checks using a spectrophotometer.

FOR MORE INFORMATIO

RESISTANCE COMPARISON

	POLYESTER COATINGS	POLYURETHANE COATINGS	NITRO CELLULOSE
GENERAL DURABILITY	1	1	4
STAIN RESISTANCE	1	1	3
HEAT RESISTANCE	1	1	5
MOISTURE RESISTANCE	1	1	3
SOLVENT RESISTANCE	1	1	5

Key:

1 = excellent

5 = poor

These results were obtained in the ICA laboratory and are analogous to the AWI standards as described in the Architectural Woodwork Quality Standards of 1997 (section 1500 - G - 7 & G4).
